

Quality dust suppressant

DUSTGONE® is an acrylic polymer designed specifically as a dust suppression agent. Because it is applied as an emulsion it can easily be applied evenly over potentially dusty substrates. Its water solubility also means that it can be applied using a variety of application methods including pressurized and non-pressurized water carts.

Once dry it is extremely stable and therefore environmentally inert. It contains no volatile chemicals and almost colourless.

Dustgone® works by locking soil, clay or dust particles together, making them heavier and less likely to be dislodged by wind or vehicle vortex. Unlike other polymer based dust suppressants, Dustgone® provides medium term dust suppression even when being driven on.

When dust is affecting your operational safety and productivity choose Dustgone®
