*Environmentally Friendly Dust Suppressant*

**DUSTGUARD MC®** is a liquid dust suppressant based on Magnesium Brine solution. Magnesium Brine is a naturally occurring liquid enhanced by extended solar evaporation to contain a high concentration of magnesium chloride.

Produced in New Zealand in accordance with good manufacturing practices and under a strict quality system, solar evaporation methods are completely natural using the sun and wind.

DustGuard MC® is primarily used on unsealed local government roads, open cut mine haul roads, underground mine roads, quarry haul roads and construction sites. DustGuard MC® is environmentally friendly and is used for both dust and erosion control as well as acting as a road stabiliser and compaction agent.

DustGuard MC® has a unique characteristic that sets it apart from other dust suppressant products. It is a hygroscopic solution. Being hygroscopic, DustGuard MC® continuously attracts and retains moisture. It gives DustGuard MC® the ability to maintain natural surfaces for long durations between applications. The level of moisture that is retained by DustGuard MC® allows it to achieve the desired level of dust control.

DustGuard MC® uses its unique characteristics to stabilise the roadway surface and in turn suppress the dust. The moisture attracted and absorbed by DustGuard MC® literally traps and locks the dust and aggregate particles together, in turn sustainability of the road surface increases.

DustGuard MC® is easily applied and is designed to penetrate the sub grade surface to create a smooth compact dust free road.
